

Mohsen Nouri

Software Developer

 mnq13800831@gmail.com  +98-9901660268  Mohsen Nouri  MNGH-27
 Iran, Tehran

SKILLS

Frontend: Javascript - Typescript - React.js - Next.js - HTML&CSS - Redux - RESTApi - SASS - Axios - ReactQuery - Mantine - PWA - SocketIO - GraphQL - Web Optimization - Test(Jest) - Atomic Design(Design System)

Backend: Node - Nest - Express - SQL - NoSQL - Redis - GraphQL - Design System - Test

Other: Scrum - Kanban - Trello - Jira - Postman - Docker - CI/CD - DataStructure - Algorithm

PROFILE

Software Developer with more than **5 years** of experience. Keen to participate in challenging projects that require research and learning which provide an opportunity for growth and development. With hands-on experience building and maintaining **scalable admin panels** and **data-intensive dashboards** using **React.js**, **Next.js**, and modern web technologies. Skilled in creating dynamic forms, managing large volumes of user data, and optimizing performance for high-traffic applications. Dedicated to delivering clean, maintainable code and seamless user experiences.

PROFESSIONAL EXPERIENCE

Software Developer

Ministry of Education

Feb 2024 – Present

Tehran, Iran

Software Developer & Team

LeaderLed a team of **Sirat (سیرت)** developers to design, develop, and deliver high-impact software solutions using modern web technologies like React, Next.js, and .Net.

- Designed and developed a web application to handle large datasets and visualize them in interactive charts and graphs, leveraging frontend technologies such as HighChart and Chart.js.
- Collaborated with DevOps to implement security policies for CI/CD pipelines, including secret management and dependency scanning.

Software Developer

Bans 

Jul 2024 – Jul 2025

Tehran, Iran

Contributed to full-stack development of modern, AI-driven web applications, leveraging Backend and Frontend. Collaborated with cross-functional teams to develop and deploy scalable, secure, and high-performance applications.

- Implemented caching mechanisms for frequently accessed data, reducing server load and improving response times.
- Implemented real-time image and audio data processing on the frontend using TensorFlow.js, enabling browser-based ML tasks such as face detection, gesture recognition, and voice command handling via webcam and microphone integration.

Software Developer

Dornica 

Sep 2022 – Nov 2023

Sari, Mazandaran

- Supervising and mentoring the frontend team (5 people)
- Helped the team stick to specific standards in developing web pages under company guidelines and Next typescript framework
- Project planning and execution, overseeing the implementation of best practices, code reviews, and quality assurance measures to ensure the delivery of highquality solutions.

Frontend Developer

Freelancer Developer

May 2021 – Apr 2022

Tehran, Iran

- Played a key role in the development of a significant project for sru.ac.ir  in next typescript platform.
- Collaborating with the Ministry of Science Research and Technology to develop a Progressive Web Application (PWA) using react to create SPA site and store data using IndexDB for efficient requests.
- Successfully delivered frontend projects utilizing pure JavaScript for clients ([Golrang Industrial Group](#) ), demonstrating versatility and proficiency in building custom solutions tailored to unique project requirements.

Frontend-Developer

Roocket 

Mar 2020 – Apr 2021

Babool, Mazandaran

- Collaborated with cross-functional teams to implement new features and enhancements, ensuring alignment with project timelines and requirements.
- Transformed the User Experience of the site using Figma, leading to a notable 50% increase in customer satisfaction.
- Collaborated with the team to integrate server-side rendering (SSR) into Next.js applications, improving initial page load times and search engine optimization (SEO) rankings.

PROJECTS

Monorepo Boilerplate

Monorepo Boilerplate – Created a ready-to-use monorepo template with Next.js, Express.js, Turborepo, and TypeScript to streamline modular application development.

- Designed a fully modular architecture using **Turborepo** and **pnpm workspaces** for scalable project structure.
- Integrated **Next.js (frontend)**, **Express.js (backend)**, and shared UI components with **Storybook**
- Configured **TypeScript**, **ESLint**, **Prettier**, and **Jest** testing to ensure high code quality and developer productivity.

Bonyad Maskan e-Services(Live Website)

Frontend work on the housing foundation's public e-services portal — large-audience, citizen-facing flows, service discovery, and resilient UI for housing-related programs and online requests at national scale.

Rasad Bonyad Maskan (Live Website)

Built and maintained a BI dashboard for Bonyad Maskan's upper management — dense analytics views, KPIs, and many chart-heavy screens fed by live and aggregated data, with emphasis on clarity at a glance and stable performance under heavy datasets.
